Introducing Windows® Small Business Server 2011 Standard

The latest version Small Business Server is here!
SBS 2011 Standard is an affordable all-in-one server solution that delivers enterprise-class technologies to help your customers protect business data, increase employee productivity, and support business growth while giving you the chance to attach multiple value added services.

Uncover new revenue opportunities by offering SBS 2011 Standard as a low-cost, high-performing server solution to small businesses.

Why Sell SBS 2011 Standard?

- *Increase your business opportunities:* Expand your business by upgrading or migrating your customers' existing platforms and delivering a wide range of value-added services.

- *Reach new customers:* Increase your market penetration and reach new customers, then up-sell these customers to new products with expanded features.

What's new in SBS 2011 Standard?

- *Based on Windows Server® 2008 R2:* to give your customers powerful hardware and scaling features and easier virtualization.

- *A simpler installation/migration path:* Whether you're upgrading or installing a new server, SBS 2011 Standard makes it simple with a simplified setup experience and user administration.

- *Better ways to manage email:* features Microsoft® Exchange Server 2010 SP1 to help simplify administration, protect communications, and provide greater business mobility for users.

- *More powerful online collaboration:* features Microsoft SharePoint® Foundation Services 2010 to power exciting new features and capabilities that help customers collaborate securely online.

- *A richer database:* includes SQL Server 2008 R2 Express Edition to deliver richer reporting and seamless integration with Office and reduced time spent on backups.

- *More powerful remote access:* new and improved Remote Web Access, allowing customers to get a lot more done remotely.

Small Business Server 2011 Premium Add On: For customers that need to run a large number of applications, the SBS 2011 Premium Add On is a highly effective data management solution for applications that share a centralized database.
